We welcome Paul Hallet's perspective on Organic farming definition. The use of this definition is only a proposal of the authors for the treatment carried out in the experiment field, and it can certainly be similar to 'use of organic amendments' but in our study, organic farming plots include an organic amendment (chipped pruned branches and weeds, manure from sheep and goats) and adventitious plants were kept covering the plot. Indeed such debate started on organic farming studies is healthy and constructive.

Best regards
