

Interactive comment on “Mitigating N₂O emissions from soil: from patching leaks to transformative action” by C. Decock et al.

Anonymous Referee #2

Received and published: 13 October 2015

This is a very interesting article which takes a wide-ranging look at the reduction of N₂O emissions. It is really nice to see such an interdisciplinary approach taken. I agree with many of the issues and concerns raised and have very few comments on this well written and structured manuscript. One addition that I think would be useful is the inclusion of a table with published values for N emissions from different conditions. Although there are many knowledge gaps there is also a considerable literature already published and such a table would help to illustrate and support many of the points raised in the manuscript.
