We thank both reviewers and the topical editor for their valuable and positive comments to our paper. Still we have used the minor comments to produce an improved version of this paper also after internal discussions between co-authors. We hope to bring with a multidisciplinary approach in an interdisciplinary setting a valuable contribution to integrated approaches to complex human environmental urban contexts. The use of Fluvisols in this research demonstrates that even soils with minor development can record valuable data of the past resulting in convincing arguments in the Vlaardingen
