General comment # Remarks to the Author While the introduction section discussing soil CO₂ measurement techniques does include some discussion of chamber and tower sampling, it should also include references that made use of soil gas wells to sample CO₂ for d13C and d18O values, as that is more similar to the work the paper describes. I suggest you include these references, both of which are relevant to arid and semi-arid soils, as that is the focus of the manuscript under discussion:

Breecker, D., & Sharp, Z. D. (2008). A field and laboratory method for monitoring the concentration and isotopic composition of soil CO₂. *Rapid Communications in Mass*

C1

Spectrometry, 22(4), 449-454.

Oerter, E. J., & Amundson, R. (2016). Climate controls on spatial and temporal variations in the formation of pedogenic carbonate in the western Great Basin of North America. *GSA Bulletin*, 128(7-8), 1095-1104.

Response: I will include the suggested references as they are apt for the topic of discussion.
