

Interactive comment on “Spatially resolved soil solution chemistry in a central European atmospherically polluted high-elevation catchment” by Daniel A. Petrash et al.

Daniel A. Petrash et al.

daniel.petrash@geology.cz

Received and published: 3 June 2019

Both of the reviewers kindly provided relevant feedback to improve our manuscript in general, and pointed out major flaws of the Introduction of our original submission. I'd like to thank on behalf of all Co-Authors their constructive criticism and suggestions to significantly improve this key section and present to the SOILD' forum a revised text of the Introduction that better describes the nature of our work, hypothesis and relevance for the SOIL community.
