

Interactive comment on “Iron and aluminum association with microbially processed organic matter via meso-density aggregate formation across soils: organo-metallic glue hypothesis” by Rota Wagai et al.

Anonymous Referee #2

Received and published: 23 July 2020

With respect to the abstract: I suggest to write that the material is "microbially processed" (important observation!), but to mention that this is assumed due to the C/N ratios. (In the discussion the point is well explained, but I missed it in the abstract.)
