23 **Table S1**

24 Site detail across a gradient of precipitation region.

25 **Table S2**

26 Relationships between the angle and length of vector and precipitation among soil profiles.

27 Dependent variables are vector angle and length, depth is a grouping factor with five levels,

28 and the precipitation are covariates in ANCOVA models. A significant depth \times covariate

29 interaction would indicate that the slope of the vector–precipitation relationship differs

30 among soil profiles. Depth followed by a different letter are significantly different

31 (Bonferroni, $P < 0.05$).

32 **Figure S1.** A schematic diagram of enzyme methodology. Blank: 250 μ l acetate buffer.

33 Standard: 50 μ l of standard substrate and 200 μ l acetate buffer. Substrate: 50 μ l of 200 μ M

34 enzyme substrate solution in 200 μ l of acetate buffer. Sample: 50 μ l of acetate buffer and 200

35 μ l of soil sample suspension. Quench Control: 50 μ l of the standard substrate (10 μ M 4-

36 methylumbelliferyl or 7-amino-4-methylcoumarin) plus 200 μ l of soil sample suspension.

37 Assay: 50 μ l of 200 μ M enzyme substrate solution and 200 μ l of soil sample suspension.

38

Table S1

Site detail across a gradient of precipitation region.

Site	Location	Altitude (m)	MAT (°C)	MAP (mm)	Soil type
Changling (CL)	44°35'N, 123°30'E	140	6.2	381	Salt-alkali
Sijianfang (SJF)	44°18'N, 124°07'E	190	6.2	416	Light chernozem
Nongan (NOA)	44°11'N, 124°37'E	250	5.5	493	Chernozem
Changchun (CC)	43°54'N, 125°13'E	232	6.3	586	Black soil
Dongliao (DL)	42°54'N, 125°25'E	310	5.9	688	Dark brown soil
Longwan (LW)	42°22'N, 126°26'E	670	5.9	756	Dark brown soil
Baihe (BH)	42°23'N, 127°05'E	780	4.1	840	Dark brown soil

Table S2

Relationships between the angle and length of vector and precipitation among soil profiles.

Dependent variables are vector angle and length, depth is a grouping factor with five levels, and the precipitation are covariates in ANCOVA models. A significant depth \times covariate interaction would indicate that the slope of the vector–precipitation relationship differs among soil profiles. Depth followed by a different letter are significantly different (Bonferroni, $P < 0.05$).

Dependent variable and covariate	Depth (cm)				
	0-10	10-20	20-30	30-40	40-50
vector angle \times precipitation	a	a	b	b	b
vector length \times precipitation			a	a	a
